

COMPRESSED AIR AUDITS

A Kaishan Australia Air Audit will clearly identify any costly air leaks or inefficiencies in your compressed air system.

Whilst compressed air is a safe, convenient and powerful industrial energy source, many systems are wasting up to 50% in energy usage due to inefficiencies in equipment, configuration and maintenance.

Utilising the latest in highly accurate, ultrasonic flow-meters and leak detection technology, an Air Audit will clearly identify any areas of inefficiency including:

- POOR MAINTENANCE
- AIR LEAKS
- PRESSURE DROP
- INAPPROPRIATE USAGE
- INEFFICIENT EQUIPMENT
- POOR RETICULATION
- INADEQUATE VENTILATION

FREE AIR AUDIT!
Your Air Audit is free if we can't save you more than the cost of the audit.

With vast experience in all makes and models of air compressors and systems, Kaishan can rectify any problems to regain maximum system operating efficiencies and save you money!
